ABSTRACT
Respiratory disorders are common worldwide. They are a major cause of morbidity and mortality. For many years we have attempted to delineate the exact causes of numerous respiratory pathologies from tuberculosis and sarcoidosis to cystic fibrosis and leprosy. The question has always been why certain individuals exhibit such severe morbidity from illness while others are only mildly affected. In this chapter, we examine the role of genetics and environment in various respiratory pathologies. We attempt to illustrate the various interactions between the human genome and environmental insults. It is clear that much more research is needed on this

5. Other Features

5.1. Reference Linking.

Jaypeedigital allows users to connect with Jaypeedigital directly or via links to many collaborating partners including abstracting and indexing services, agencies, aggregators, other third party providers and vice versa.

Viewing the cited reference list of a full-text article in Jaypeedigital, you will find icons of portals where the citations are linked to the relevant contents hosted in the sites of the co-operating partners of Jaypeedigital. If you are also subscribing to the services of the collaborating partners, you will be able to view bibliographic citations, abstracts, reviews or even full text via these reference links.

Thus, in order to get the reference lists, users can click the reference linking button from the chapter detail page and will get the following screen along with the references.
